

Holland Bloorview

Kids Rehabilitation Hospital

Conducting innovative research programs aimed at improving outcomes and quality of life for individuals with autism

Have you been diagnosed with an autism spectrum disorder (ASD, autism, PDD-NOS, or Asperger's syndrome)?

Are you between 12-17 years of age?

We are currently conducting clinical trials to investigate whether a drug called tideglusib helps to improve symptoms of Autism Spectrum Disorder, specifically social engagement, social function, and repetitive behaviours.
